

### Rising 8<sup>th</sup> Grade Language Arts & Algebra I Honors Summer Assignments 2025

### Language Arts

8th grade will select **one book** to read from the following list of books:

- Because of Mr. Terupt Rob Buyea
- The Seventh Most Important Thing Shelley Pearsall
- Finding Mighty Sheela Chari.

When students have finished reading, they will need to create 3 different creative journal entries (pages). A creative journal entry is a notebook page with drawings and/or sketches along with the writing. Examples of creative journal entries are attached.

- Ideas include setting, characters, plot, theme, and free-choice entries.
- Journal entries need to be completed on notebook paper and labeled.
- In order to receive full credit, each journal must include the following:
  - o graphics with color
  - o writing that includes text evidence
  - analysis (thought prompts)
- Entries should be detailed, thoughtful, and creative.

Students will submit their journals for credit on the first day of school in August, worth 60 points. They should also bring their book with them to school for the first week, as we will be discussing the books in class.

**Choice Reading:**\_ While students are only required to read one book, reading all summer long is encouraged. Choose novels that interest you and are on your reading level. It is good to challenge yourself a little! Remember, reading is the single most important factor in student success.

### **Algebra I Honors**

Summer math is assigned to help students retain math skills and enable the math classes to spend less time reviewing past material and forge ahead with new math skills. It has been designed to review topics students learned during the past school year, which are crucial for success in the next grade level.

All students are expected to complete the entire Summer Skills packet to the best of their ability. Students should show their work so we can see the thought process used to complete the problems.

or your final answer. Please keep in mind we are looking for a good effort at completing the problems, more than a correct answer. Good effort includes attempting the problems and showing the work/thought process used to achieve an answer. A pacing suggestion would be to complete 2 - 3 pages a week. This assignment is due Wednesday, August 13th, the first day of the new school year, and is worth 50 points.

#### **Realistic Fiction**

age-appropriate themes:

- Jason Reynolds Ghost, Look Both Ways
- Sharon Draper Out of My Mind, Blended
- Jacqueline Woodson Brown Girl Dreaming, Harbor Me
- Gordon Korman Restart, Ungifted
- R.J. Palacio Wonder

#### **Historical Fiction**

- Ruta Sepetys Between Shades of Gray, Salt to the Sea
- Lauren Tarshis I Survived series (accessible for younger or reluctant readers)
- Alan Gratz Refugee, Ground Zero, Prisoner B-3087
- Pam Muñoz Ryan Esperanza Rising, Echo

#### Fantasy / Science Fiction

- Rick Riordan Percy Jackson series, Heroes of Olympus
- Tamora Pierce Song of the Lioness, The Circle of Magic
- Eoin Colfer Artemis Fowl series
- Tui T. Sutherland Wings of Fire series
- Brandon Mull Fablehaven, Beyonders

### **Mystery / Adventure**

- Stuart Gibbs Spy School, FunJungle
- Trenton Lee Stewart The Mysterious Benedict Society
- Jennifer Nielsen The False Prince, Resistance
- Anthony Horowitz Alex Rider series

#### **Graphic Novels**

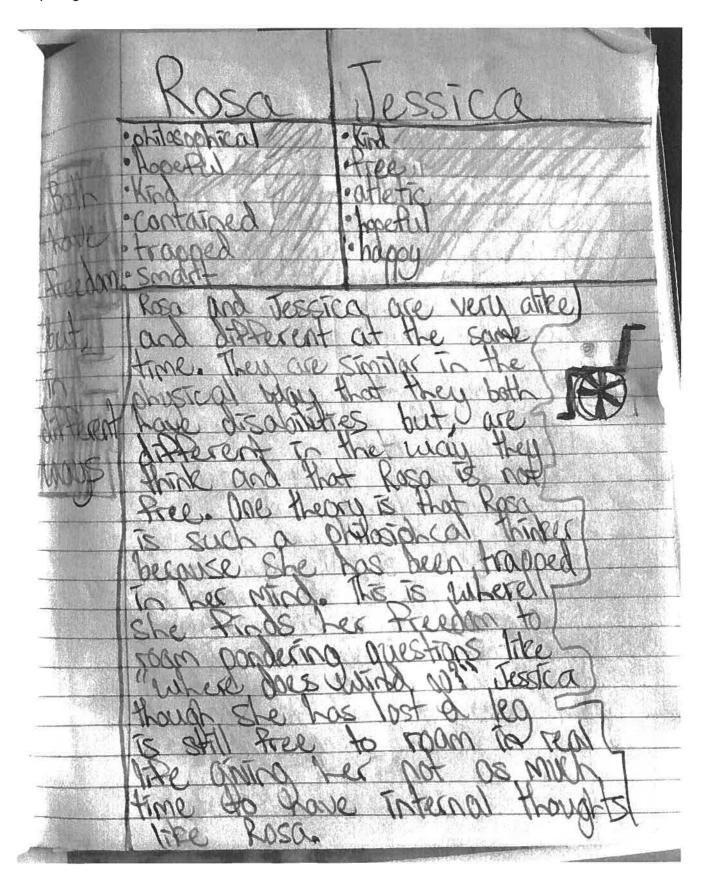

- Raina Telgemeier Smile, Drama, Guts
- Gene Luen Yang American Born Chinese, Dragon Hoops
- Victoria Jamieson Roller Girl, When Stars Are Scattered
- Jerry Craft New Kid, Class Act

#### Poetry / Novels in Verse

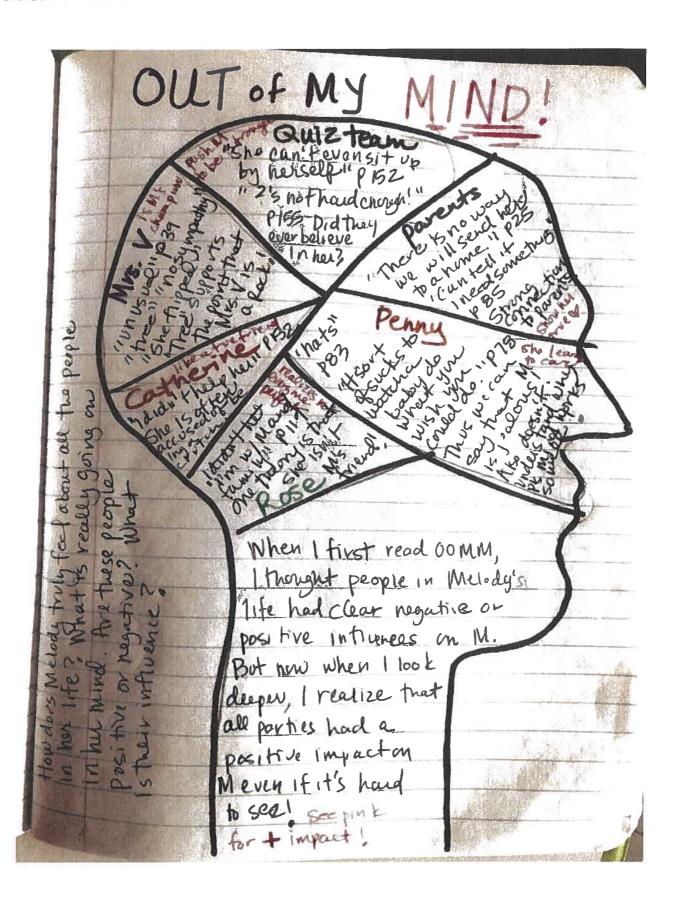

- Kwame Alexander The Crossover, Booked
- Nikki Grimes Garvey's Choice, Bronx Masquerade

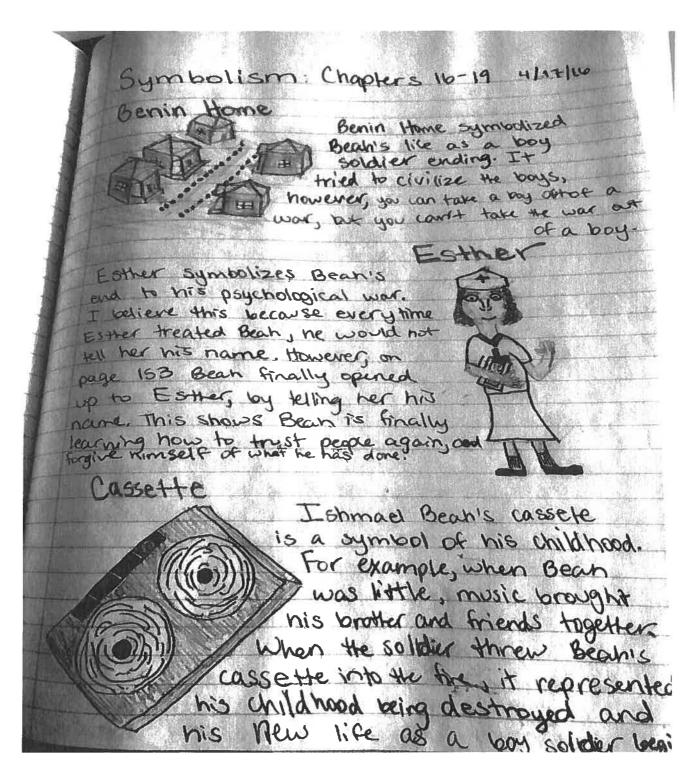

### 7<sup>th</sup> and 8<sup>th</sup> Grade Samples

## 0-2 Algebra 1 Summer Skills

### Real Numbers

**CLASSIFY REAL NUMBERS** The set of <u>real numbers</u> consists of all whole numbers, integers, rational numbers, and irrational numbers.

- Natural numbers: counting numbers 1, 2, 3, ...
- Whole numbers: counting numbers, including 0 0, 1, 2, 3, ...
- Integers: whole numbers and their negative counterparts ...,-2, -1, 0, 1, 2, ...
- Rational numbers: can be written as fractions  $-7.5, \frac{5}{8}, \sqrt{16}, 0.\overline{3}$
- Irrational numbers: decimals that do not repeat or terminate  $\pi$ ,  $\sqrt{3}$ , 0.121221222...

**EXAMPLE:** Name the set or sets of numbers to which each real number belongs.

a. 
$$\frac{5}{22}$$

5 and 22 are integers and  $5 \div 22 = 0.2272727...$ , which is a repeating decimal, so this number is a rational number.

b. √<del>56</del>

 $\sqrt{56}$  = 7.48331477..., which is not a repeating or terminating decimal, so this number is **irrational**.

c.  $\sqrt{81}$ 

 $\sqrt{81}$ = 9, this number is a **natural number**, a **whole number**, an **integer**, and a **rational number**.

### **EXERCISES**

Name the set or sets of numbers to which each real number belongs.

3. 
$$\frac{36}{6}$$

5. 
$$-\frac{9}{10}$$

6. 
$$\sqrt{121}$$

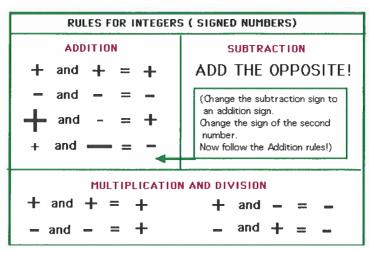

NAME		
INAIVIE		

## 0-3 Algebra 1 Summer Skills (continued)

### Operations with Integers

An integer is any number from the set  $\{\dots, -2, -1, 0, 1, 2, \dots\}$ . You can follow the **Rules for Integers** to add, subtract,

multiply, and divide integers.

### **EXERCISES**

Find each sum or difference.

$$3.41+(-56)$$

$$4.50 - 82$$

$$5. - 47 - 13$$

$$6. - 80 + 102$$

7. A dolphin swimming 24 feet below the ocean's surface dives 18 feet straight down. How many feet below the ocean's surface is the dolphin now?

Find each product or quotient.

10. 
$$54 \div (-6)$$

$$13. -200 \div 2$$

**14.** Joey earns \$13 per hour. He works 14 hours a week. His employer withholds \$45 from each paycheck for taxes. If he is paid weekly, what is the amount of his weekly paycheck?

## 0-4 Algebra 1 Summer Skills

### Adding and Subtracting Rational Numbers

Add and Subtract Like Fractions To add or subtract fractions with the same denominators, called like denominators, add or subtract the numerators and write the sum or difference over the denominator.

**EXAMPLE 1:** Find each sum or difference. Write in simplest form.

$$a. \frac{3}{5} + \frac{1}{5}$$

$$\frac{3}{5} + \frac{1}{5} = \frac{3+1}{5} = \frac{4}{5}$$

b. 
$$\frac{7}{16} - \frac{1}{16}$$

$$\frac{7}{16} - \frac{1}{16} = \frac{7 - 1}{16} = \frac{6}{16}$$

$$c.\frac{4}{9} - \frac{7}{9}$$

$$\frac{4}{9} - \frac{7}{9} = \frac{4-7}{9} = -\frac{3}{9} \text{ or } -\frac{1}{3}$$

Add and Subtract Unlike Fractions Fractions with different denominators are called unlike fractions. To add or subtract fractions with unlike denominators, rename the fractions with a common denominator. Then add or subtract. Simplify if possible.

**EXAMPLE 2:** Find each sum or difference. Write in simplest form.

$$a.\frac{1}{2} + \frac{2}{3}$$

$$\frac{1}{2} + \frac{2}{2} = \frac{3}{6} + \frac{4}{6} = \frac{3+4}{6} = \frac{7}{6} \text{ or } 1\frac{1}{6}$$

$$b.\frac{3}{8}-\frac{1}{3}$$

$$\frac{3}{8} - \frac{1}{3} = \frac{9}{24} - \frac{8}{24} = \frac{9-8}{24} = \frac{1}{24}$$

$$c.\frac{2}{5} - \frac{3}{4}$$

$$\frac{1}{2} + \frac{2}{3} = \frac{3}{6} + \frac{4}{6} = \frac{3+4}{6} = \frac{7}{6} \text{ or } 1\frac{1}{6}$$

$$\frac{3}{8} - \frac{1}{3} = \frac{9}{24} - \frac{8}{24} = \frac{9-8}{24} = \frac{1}{24}$$

$$\frac{2}{5} - \frac{3}{4} = \frac{8}{20} - \frac{15}{20} = \frac{8-15}{20} = -\frac{7}{20}$$

Find each sum or difference. Write in simplest form.

1. 
$$\frac{2}{3} + \frac{1}{3}$$

2. 
$$\frac{6}{7} - \frac{3}{7}$$

3. 
$$\frac{5}{8} + \frac{7}{8}$$

4. 
$$\frac{4}{3} + \frac{4}{3}$$

5. 
$$\frac{7}{15} - \frac{2}{15}$$

$$6.\frac{3}{7} + \frac{5}{14}$$

7. 
$$\frac{3}{8} + \frac{1}{6}$$

8. 
$$\frac{13}{20} - \frac{2}{5}$$

9. 
$$-\frac{1}{6} - \frac{2}{3}$$

10. 
$$\frac{1}{2} - \frac{4}{5}$$

11. 
$$-\frac{4}{5} + \left(-\frac{1}{3}\right)$$

12. 
$$-\frac{1}{12} - \left(-\frac{3}{4}\right)$$

13. About  $\frac{7}{10}$  of the surface of the Earth is covered by water. The rest of the surface is covered by land. How much of the Earth's surface is covered by land?

## 0-5 Algebra 1 Summer Skills (continued)

### **Multiplying and Dividing Rational Numbers**

**Multiply Fractions** To multiply fractions, multiply the numerators and multiply the denominators:  $\frac{a}{b} \cdot \frac{c}{d} = \frac{a \cdot c}{b \cdot d}$ , where  $b, d \neq 0$ . Fractions may be simplified either <u>before</u> or after multiplying. When multiplying negative fractions, assign the negative sign to the numerator.

**EXAMPLE 1:** Find each product. Write in simplest form.

a. 
$$-\frac{8}{15} \cdot \frac{5}{7} = \frac{-8}{15} \cdot \frac{5}{7}$$
$$= \frac{-8}{\cancel{15}} \cdot \frac{\cancel{5}}{7}$$
$$3$$

$$= \frac{-8}{21} = -\frac{8}{21}$$

**b.** 
$$7\frac{1}{2} \cdot 2\frac{2}{3} = \frac{15}{2} \cdot \frac{8}{3}$$

$$5 \quad 4$$

$$= \frac{1}{2} \cdot \frac{2}{3}$$

$$1 \quad 1$$

$$=\frac{20}{1}$$
 or 20

**Divide Fractions** Two numbers whose product is 1 are called multiplicative inverses or reciprocals. For any fraction  $\frac{a}{b}$ , where  $a, b \neq 0, \frac{b}{a}$  is the multiplicative inverse and  $\frac{a}{b} \cdot \frac{b}{a} = 1$ . This means that  $\frac{2}{3}$  and  $\frac{3}{2}$  are multiplicative inverses because  $\frac{2}{3} \cdot \frac{3}{2} = 1$ . To divide by a fraction, multiply by its multiplicative inverse:  $\frac{a}{b} \cdot \frac{c}{d} = \frac{a}{b} \cdot \frac{d}{c} = \frac{ad}{bc}$ , where  $b, c, d \neq 0$ .

**EXAMPLE 2:** Find each quotient. Write in simplest form.

a. 
$$\frac{3}{4} \div \frac{5}{8} = \frac{3}{4} \cdot \frac{8}{5}$$

$$= \frac{3}{\cancel{\cancel{8}}} \cdot \frac{\cancel{\cancel{8}}}{5}$$

$$= \frac{6}{5} \text{ or } 1 \cdot \frac{1}{5}$$

**b.** 
$$-6\frac{2}{5} \div 2\frac{1}{5} = \frac{-32}{5} \div \frac{11}{5}$$

$$=\frac{-32}{5}\cdot\frac{5}{11}$$

$$=\frac{-32}{\cancel{5}}\cdot\frac{\cancel{5}}{\cancel{11}}$$

$$= \frac{-32}{11} \text{ or } -2\frac{10}{11}$$

### **EXERCISES**

Find each product or quotient.

$$1.\frac{2}{9} \cdot \frac{1}{2}$$

$$2. - \frac{9}{4} \cdot \frac{1}{18}$$

3. 
$$\left(-\frac{30}{11}\right) \cdot \left(-\frac{1}{3}\right)$$

$$4.\frac{16}{9} \div \frac{4}{9}$$

$$5.\frac{3}{7} \div \left(-\frac{1}{5}\right)$$

$$6. - 1\frac{1}{3} \div \frac{2}{3}$$

- 7. A large pizza at Pizza Shack has 12 slices. If Bob at  $\frac{1}{4}$  if the pizza, how many of the slices of pizza did he eat?
- 8. How many boards, each 2 feet 8 inches long, can be cut from a board 16 feet long if there is no waste? (Hint: 1 ft = 12 in)

### Variables and Expressions

**Write Verbal Expressions** An **algebraic expression** consists of one or more numbers and variables along with one or more arithmetic operations. In algebra, **variables** are symbols used to represent unspecified numbers or values. Any letter may be used as a variable.

**EXAMPLE:** Write a verbal expression for each algebraic expression.

a.  $6n^2$ 

the product of 6 and n squared

b.  $n^3 - 12m$ 

the difference of n cubed and twelve times m

+	_	×	÷
plus	minus	times	divide
the sum of	the difference of	the product of	the quotient of
Increased by	decreased by	of	divided by
more than	less than		among

#### **EXERCISES**

Write a verbal expression for each algebraic expression.

1. 
$$w - 1$$

$$2.\frac{1}{3}a^3$$

$$3.81 + 2x$$

$$6.6^2$$

$$7.2n^2 + 4$$

8. 
$$a^3 * b^3$$

NAME	DATE
<b>1-1 Algebra 1 Sumn</b> <i>Variables and Expressions</i>	1er Skills (continued)
	ing verbal expressions into algebraic expressions is an important algebraic o represent unspecified numbers or values. Any letter may be used as a
<b>EXAMPLE:</b> Write an algebraic expression fo	or each verbal expression.

### Order of Operations

Evaluate Numerical Expressions Numerical expressions often contain more than one operation. To evaluate them, use the rules for order of operations shown below.

### Order of **Operations**

**Step 1:** Evaluate expressions inside grouping symbols.

Step 2: Evaluate all powers.

Step 3: Do all multiplication and/or division from left to right →.

**Step 4:** Do all addition and/or subtraction from **left** to **right**  $\rightarrow$ .

### **EXAMPLE 1:** Evaluate each expression.

$$3^4 = 3 \cdot 3 \cdot 3 \cdot 3$$
 Use 3 as a factor 4 times.  
= 81 Multiply.

$$6^3 = 6 \cdot 6 \cdot 6$$
$$= 216$$

Use 6 as a factor 3 times.

Multiply.

$$5 \cdot (12 \div 3) = 5(4)$$
 Divide 12 by 3.

= 20

Multiply 5 and 4.

=3(18)

Add 2 and 16.

= 54

Multiply 3 and 18.

### **EXERCISES**

Evaluate each expression.

$$1.5^{2}$$

$$2.3^3$$

$$3.10^4$$

$$4.12^2$$

$$7.(8-4) \cdot 2$$

8. 
$$(12 + 4) \cdot 6$$

9. 
$$10 + 8 \cdot 1$$

# 1-2 Algebra 1 Summer Skills (continued) Order of Operations

**Evaluate Algebraic Expressions** Algebraic expressions may contain more than one operation. Algebraic expressions can be evaluated if the values of the variables are known. First, replace the variables with their values. Then use the <u>order of operations</u> to calculate the value of the resulting numerical expression.

**EXAMPLE:** Evaluate  $x^3 + 5(y - 3)$  if x = 2 and y = 12.

$$x^3 + 5(y - 3) = 2^3 + 5(12 - 3)$$

Replace x with 2 and y with 12.

$$= 8 + 5(12 - 3)$$

Evaluate 23.

$$= 8 + 5(9)$$

Subtract 3 from 12.

$$= 8 + 45$$

Multiply 5 and 9.

Add 8 and 45.

The solution is 53.

### **EXERCISES**

Evaluate each expression if x = 2, y = 3, z = 4,  $a = \frac{4}{5}$ , and  $b = \frac{3}{5}$ .

1. 
$$x + 7$$

2. 
$$3x - 5$$

3. 
$$x + y^2$$

4. 
$$x^3 + y + z^2$$

5. 
$$6a + 8b$$

**6.** 
$$23 - (a + b)$$

7. 
$$\frac{y^2}{z^2}$$

8. 
$$2xyz + 5$$

**9.** 
$$x(2y + 3z)$$

10. 
$$(10x)^2 + 100a$$

11. 
$$\frac{3xy-4}{7x}$$

12. 
$$a^2 + 2b$$

## 1-3 Algebra 1 Summer Skills

### **Properties of Numbers**

Identity and Equality Properties The identity and equality properties in the chart below can help you solve algebraic equations and evaluate mathematical expressions.

Additive Identity	For any number $a$ , $a + 0 = a$ .
Additive Inverse	For any number $a$ , $a + (-a) = 0$ .
Multiplicative Identity	For any number $a$ , $a \cdot 1 = a$ .
Multiplicative Property of 0	For any number $a$ , $a \cdot 0 = 0$ .
Multiplicative Inverse Property	For every number $\frac{a}{b}$ , where $a, b \neq 0$ , there is exactly one number $\frac{b}{a}$ (multiplicative inverse or reciprocal) such that the product $\frac{a}{b} \cdot \frac{b}{a} = 1$ .
Substitution Property	If $a = b$ , then a may be replaced by b in any expression.

**EXAMPLE:** Evaluate  $24 \cdot 1 - 8 + 5(9 \div 3 - 3)$ . Name the property used in each step.

$$24 \cdot 1 - 8 + 5(9 \div 3 - 3) = 24 \cdot 1 - 8 + 5(3 - 3)$$
$$= 24 \cdot 1 - 8 + 5(0)$$
$$= 24 \cdot 8 + 5(0)$$

= 24 - 8 + 5(0)

= 24 - 8 + 0= 16 + 0

= 16

Substitution;  $9 \div 3 = 3$ 

Substitution; 3 - 3 = 0

Multiplicative Identity; 24 • 1 = 24

Multiplicative Property of Zero; 5(0) = 0

Substitution; 24 - 8 = 16

Additive Identity; 16 + 0 = 16

#### **EXERCISES**

Evaluate each expression. Name the property used in each step.

1. 
$$2\left[\frac{1}{4} + \left(\frac{1}{2}\right)^2\right]$$

**2.** 
$$15 \cdot 1 - 9 + 2(15 \div 3 - 5)$$

3. 
$$2(3 \cdot 5 \cdot 1 - 14) - 4 \cdot \frac{1}{4}$$

4. 
$$18 \cdot 1 - 3 \cdot 2 + 2(6 \div 3 - 2)$$

## 1-3 Algebra 1 Summer Skills

(continued)

### **Properties of Numbers**

**Commutative and Associative Properties** The Commutative and Associative Properties can be used to simplify expressions. The **Commutative** Properties state that the *order* in which you add or multiply numbers does not change their sum or product. The **Associative** Properties state that the way you *group* three or more numbers when adding or multiplying does not change their sum or product.

Commutative Properties	For any numbers $a$ and $b$ , $a + b = b + a$ and $a \cdot b = b \cdot a$ .
Associative Properties	For any numbers $a$ , $b$ , and $c$ , $(a + b) + c = a + (b + c)$ and $(ab)c = a(bc)$ .

**Example 1:** Evaluate  $6 \cdot 2 \cdot 3 \cdot 5$  using properties of numbers. Name the property used

$$6 \cdot 2 \cdot 3 \cdot 5 = 6 \cdot 3 \cdot 2 \cdot 5$$
 Commutative Property
$$= (6 \cdot 3)(2 \cdot 5)$$
 Associative Property
$$= 18 \cdot 10$$
 Multiply
$$= 180$$
 Multiply

The product is 180.

**Example 2:** Evaluate 8.2 + 2.5 + 2.5 + 1.8 using properties of numbers. Name the property used in each step.

$$8.2 + 2.5 + 2.5 + 1.8$$
  
=  $8.2 + 1.8 + 2.5 + 2.5$  Commutative Property  
=  $(8.2 + 1.8) + (2.5 + 2.5)$  Associative Property  
=  $10 + 5$  Add  
=  $15$  Add

The sum is 15.

#### **Exercises**

in each step.

Evaluate each expression using properties of numbers. Name the property used in each step.

1. 
$$12 + 10 + 8 + 5$$

4. 
$$12 + 20 + 10 + 5$$

5. 
$$3\frac{1}{2} + 4 + 2\frac{1}{2} + 3$$

## 1-4 Algebra 1 Summer Skills

### The Distributive Property

**Evaluate Expressions** The Distributive Property can be used to help evaluate expressions.

Distributive Property

For any numbers a, b, and c,

$$a(b+c) = ab + ac$$
 and  $(b+c)a = ba + ca$  and

$$a(b-c) = ab - ac$$
 and  $(b-c)a = ba - ca$ .

**Example 1:** Use the Distributive Property to rewrite 6(8 + 10). Then evaluate.

$$6(8 + 10) = 6 \cdot 8 + 6 \cdot 10$$

Distributive Property

$$=48 + 60$$

Multiply.

$$= 108$$

Add.

**Example 2:** Use the Distributive Property to rewrite  $-2(3x^2 + 5x + 1)$ . Then simplify.

$$-2(3x^2 + 5x + 1) = -2(3x^2) + (-2)(5x) + (-2)(1)$$

Distributive Property

$$=-6x^2 + (-10x) + (-2)$$

Multiply.

$$=-6x^2-10x-2$$

Simplify.

### **Exercises**

Use the Distributive Property to rewrite each expression. Then evaluate or simplify.

**2.** 
$$4(9-7)$$

3. 
$$5(4x - 9)$$

**4.** 
$$3(8-2x)$$

5. 
$$12(2+\frac{1}{2}x)$$

6. 
$$\frac{1}{4}(12-4t)$$

7. 
$$3(5+4+3)$$

8. 
$$2(2r+4s+6t)$$

9. 
$$4(2x^2 + 9x - 3)$$

NAME	DATE
INCIVIL	

## 1-4 Algebra 1 Summer Skills

(continued)

### The Distributive Property

**Simplify Expressions** A **term** is a number, a variable, or a product or quotient of numbers and variables. **Like terms** are terms that contain the same variables, with corresponding variables having the same powers. The Distributive Property and properties of equalities can be used to simplify expressions. An expression is in **simplest form** if it is replaced by an **equivalent** expression with no like terms or parentheses.

**Example:** Simplify  $4(a^2 + 3ab) - ab$ .

$$4(a^2 + 3ab) - ab = 4(a^2 + 3ab) - 1ab$$
 Multiplicative Identity  
 $= 4a^2 + 12ab - 1ab$  Distributive Property  
 $= 4a^2 + (12 - 1)ab$  Distributive Property  
 $= 4a^2 + 11ab$  Substitution

#### **Exercises**

Simplify each expression. If not possible, write simplified.

1. 
$$12a - a$$

**2.** 
$$3x + 6x$$

3. 
$$3x - 1$$

5. 
$$3x^2 + 2x^2$$

$$6.-6x+3x^2+10x^2$$

Write an algebraic expression for each verbal expression. Then simplify, indicating the properties used.

7. six times the difference of 2a and b, increased by 4b

8. two times the sum of x squared and y squared, increased by three times the sum of x squared and y squared

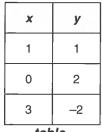

## 1-6 Algebra 1 Summer Skills

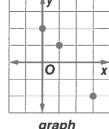

### Relations

Represent a Relation A relation is a set of ordered pairs. A relation can be represented by a set of ordered pairs, a table, a graph, or a mapping. A mapping illustrates how each element of the domain is paired with an element in the range. The set of first numbers of the ordered pairs is the **domain** (x values). The set of second numbers of the ordered pairs is the range (y values) of the relation.

### **Example:**

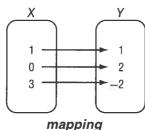

a. Express the relation  $\{(1, 1), (0, 2), (3, -2)\}$  as a table, a graph, and a mapping.

graph

b. Determine the domain and the range of the relation.

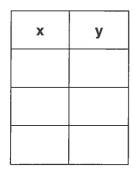

The domain for this relation is  $\{0, 1, 3\}$ . The range for this relation is  $\{-2, 1, 2\}$ .

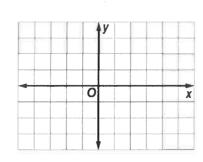

#### **Exercises**

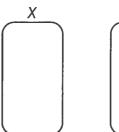

1a. Express the relation

$$\{(-2, -1), (3, 3), (4, 3)\}$$

as a table, a graph, and a mapping.

**1b.** Determine the domain and the range of the relation.

## 1-6 Algebra 1 Summer Skills

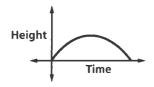

(continued)

### Relations

**Graphs of a Relation** The value of the variable in a relation that is subject to choice is called the **independent variable**. The variable with a value that is dependent on the value of the independent variable is called the **dependent variable**. These relations can be graphed without a scale on either axis, and interpreted by analyzing the shape.

The **domain** (x values) = **independent** and the **range** (y values) = **dependent**.

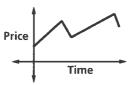

**Example 1:** The graph below represents the height of a football after it is kicked downfield. Identify the independent and the dependent variable for the relation. Then describe what happens in the graph.

independent variable: time dependent variable: height

The football starts on the ground when it is kicked. It gains altitude until it reaches a maximum height, then it loses altitude until it falls to the ground.

**Example 2:** The graph below represents the price of stock over time. Identify the independent and dependent variable for the relation. Then describe what happens in the graph.

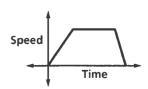

independent variable: time dependent variable: price

The price increases steadily, then it falls, then increases, then falls again.

#### **Exercises**

Identify the independent and dependent variables for each relation. Then describe what is happening in each graph.

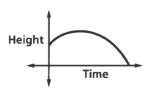

1. The graph represents the speed of a car as it travels to the grocery store.

**2.** The graph represents the balance of a savings account over time.

3. The graph represents the height of a baseball after it is hit.

## 1-7 Algebra 1 Summer Skills

### **Functions**

**Identify Functions** Relations in which each element of the domain is paired with *exactly one* element of the range are called **functions**. A function is a relationship between the input (domain/x values) and the output (range/y values). Each input (x value) has *exactly one* output (y value).

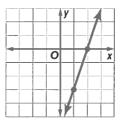

#### **EXAMPLE 1:**

Determine whether the relation  $\{(6, -3), (4, 1), (7, -2), (-3, 1)\}$  is a function.

Since each element of the domain is paired with exactly one element of the range, this relation is a function. Yes

### **EXAMPLE 2:**

Determine whether the relation is a function.

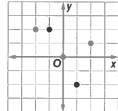

The graph is a line.

If you follow the line through each value of x, there is only one corresponding y value. For each value of x, the line passes through just one point of the graph. Thus, the line represents a function. **Yes** 

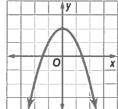

#### **EXERCISES**

Determine whether each relation is a function. Answer "yes" or "no".

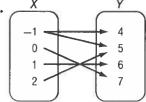

1.

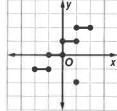

2

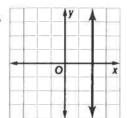

3.

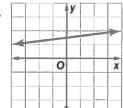

4

5.

6.

7. 
$$\{(4, 2), (2, 3), (6, 1)\}$$

8. 
$$\{(-3, -3), (-3, 4), (-2, 4)\}$$

9. 
$$\{(-1,0),(1,0)\}$$

## 1-7 Algebra 1 Summer Skills (continued)

### **Functions**

**Find Function Values** Equations that are functions can be written in a form called **function notation**. For example, y = 2x - 1 can be written as f(x) = 2x - 1. In the function, x represents the elements of the domain, and f(x) represents the elements of the range. Suppose you want to find the value in the range that corresponds to the element 2 in the domain. This is written f(2) and is read "f of 2." The value of f(2) is found by substituting 2 for x in the equation.

**Example:** If f(x) = 3x - 4, find each value.

a. f(3)

$$f(3) = 3(3) - 4$$
 Replace  $x$  with 3.  
= 9 - 4 Multiply.  
= 5 Simplify.

**b.** f(-2)

$$f(-2) = 3(-2) - 4$$
 Replace x with -2.  
= -6 - 4 Multiply.  
= -10 Simplify.

#### **Exercises**

If f(x) = 2x - 4 and  $g(x) = x^2 - 4x$ , find each value.

**1.** 
$$f(4)$$

$$3. f(-5)$$

**4.** 
$$g(-3)$$

**5.** 
$$f(0)$$

**6.** 
$$g(0)$$

7. 
$$f(3) - 1$$

8. 
$$f\left(\frac{1}{4}\right)$$

**9.** 
$$g(\frac{1}{4})$$

### Writing Equations

**Write Equations** Writing equations is one strategy for solving problems. You can use a variable to represent an unspecified number or measure referred to in a problem. Then you can write a verbal expression as an algebraic expression.

**EXAMPLE 1:** Translate each sentence into an equation or a formula.

a. Ten times a number x is equal to 2.8 times the difference y minus z.

$$10 \times x = 2.8 \times (y - z)$$
  
The equation is  $10x = 2.8(y - z)$ .

b. A number m minus 8 is the same as a number n divided by 2.

$$m-8=n \div 2$$
  
The equation is  $m-8=\frac{n}{2}$ .

c. The area of a rectangle equals the length times the width. Translate this sentence into a formula.

Let 
$$A = \text{area}$$
,  $\ell = \text{length}$ , and  $w = \text{width}$ .  
Formula: Area equals length times width.

$$A = \ell \times w$$

The formula for the area of a rectangle is  $A = \ell w$ .

#### **EXERCISES**

Translate each sentence into an equation or formula.

- 1. Three times a number t minus twelve equals forty.
- **2.** One-half of the difference of a and b is 54.
- 3. Three times the sum of d and 4 is 32.
- **4.** The area A of a circle is the product of  $\pi$  and the radius r squared.
- **5. WEIGHT LOSS** Lou wants to lose weight to audition for a part in a play. He weighs 160 pounds now. He wants to weigh 150 pounds.
  - **a.** If p represents the number of pounds he wants to lose, write an equation to represent this situation.
  - **b.** How many pounds does he need to lose to reach his goal?

**EXAMPLE 2:** Use the Four-Step Problem-Solving Plan.

POPULATION The population of the United States in July 2007 was about 301,000,000, and the land area of the United States is about 3,500,000 square miles. Find the average number of people per square mile in the United States.

- **Step 1** *Read* You know that there are 301,000,000 people. You want to know the number of people per square mile.
- **Step 2** *Plan* Write an equation to represent the situation. Let p represent the number of people per square mile.  $3,500,000 \times p = 301,000,000$

**Step 3** *Solve* 3,500,000 × 
$$p = 301,000,000$$
. 3,500,000 $p = 301,000,000$  Divide each side by

p = 86 3,500,000.

There are 86 people per square mile.

**Step 4** *Check* If there are 86 people per square mile and there are 3,500,000 square miles,  $86 \times 3,500,000 = 301,000,000$ . The answer makes sense.

# **2-1 Algebra 1 Summer Skills** (continued) Writing Equations

Write Verbal Sentences You can translate equations into verbal sentences.

**EXAMPLE:** Translate each equation into a sentence.

a. 4n - 8 = 12

4n

$$8 = 12$$

Four times n minus eight equals twelve.

**b.**  $a^2 + b^2 = c^2$ 

 $a^2 + b^2 =$ 

 $c^2$ 

The sum of the squares of a and b is equal to the square of c.

#### **EXERCISES**

Translate each equation into a sentence.

1. 4a - 5 = 23

**2.** 
$$10 + k = 4k$$

3. 6xy = 24

**4.** 
$$x^2 + y^2 = 8$$

5. p + 3 = 2p

**6.** 
$$b = \frac{1}{3}(h-1)$$

7. 
$$100 - 2x = 80$$

**8.** 
$$3(g + h) = 12$$

## 2-2 Algebra 1 Summer Skills

### Solving One-Step Equations

Solve Equations Using Addition and Subtraction If the same number is added to each side of an equation, the resulting equation is equivalent to the original one. In general if the original equation involves subtraction, this property will help you solve the equation. Similarly, if the same number is subtracted from each side of an equation, the resulting equation is equivalent to the original one. This property will help you solve equations involving addition.

Addition Property of Equality	For any numbers $a$ , $b$ , and $c$ , if $a = b$ , then $a + c = b + c$ .
<b>Subtraction Property of Equality</b>	For any numbers $a$ , $b$ , and $c$ , if $a = b$ , then $a - c = b - c$ .

**EXAMPLE 1:** Solve m - 32 = 18.

$$m - 32 = 18$$

Original equation

$$m - 32 + 32 = 18 + 32$$
 Add 32 to each side.

$$m = 50$$

Simplify.

The solution is **50**.

Example 2: Solve 22 + p = -12.

$$22 + p = -12$$

Original equation

$$22 + p - 22 = -12 - 22$$
 Subtract 22 from each side.

$$p = -34$$

Simplify.

The solution is -34.

**EXERCISES** 

Solve each equation. Check your solution.

1. 
$$h - 3 = -2$$

**2.** 
$$m - 8 = -12$$

3. 
$$p - 5 = 15$$

**4.** 
$$20 = y - 8$$

5. 
$$k - 0.5 = 2.3$$

6. 
$$w - \frac{1}{2} = \frac{5}{8}$$

$$7. x + 12 = 6$$

8. 
$$w + 2 = -13$$

$$9. -17 = b + 4$$

**10.** 
$$k + (-9) = 7$$

11. 
$$-3.2 = \ell + (-0.2)$$

12. 
$$-\frac{3}{8} + x = \frac{5}{8}$$

## 2-2 Algebra 1 Summer Skills (continued)

### Solving One-Step Equations

**Solve Equations Using Multiplication and Division** If each side of an equation is multiplied by the same number, the resulting equation is equivalent to the given one. You can use the property to solve equations involving multiplication and division. To solve equations with multiplication and division, you can also use the Division Property of Equality. If each side of an equation is divided by the same number, the resulting equation is true.

Multiplication Property of Equality	For any numbers $a$ , $b$ , and $c$ , if $a = b$ , then $ac = bc$ .
Division Property of Equality	For any numbers $a$ , $b$ , and $c$ , with $c \ne 0$ , if $a = b$ , then $\frac{a}{b} = \frac{b}{c}$ .

**EXAMPLE 1:** Solve  $3\frac{1}{2}p = 1\frac{1}{2}$ .

$$3\frac{1}{2}p = 1\frac{1}{2}.$$

Original equation

$$\frac{7}{2}p = \frac{3}{2}$$

Rewrite each mixed number as an improper fraction.

$$\frac{2}{7}\left(\frac{7}{2}p\right) = \frac{2}{7}\left(\frac{3}{2}\right)$$

Multiply each side by  $\frac{2}{7}$ .

$$p = \frac{3}{7}$$

Simplify.

The solution is  $\frac{3}{7}$ .

**EXAMPLE 2:** Solve -5n = 60.

$$-5n = 60$$

Original equation

$$\frac{-5n}{-5} = \frac{60}{-5}$$

Divide each side by -5.

$$n = -12$$

Simplify.

The solution is -12.

#### **EXERCISES**

Solve each equation. Check your solution.

1. 
$$\frac{h}{3} = -2$$

2. 
$$\frac{1}{8}m = 6$$

$$3.\frac{1}{5}p = \frac{3}{5}$$

4. 
$$5 = \frac{y}{12}$$

$$5. - \frac{1}{4}k = -2.5$$

$$6. - \frac{m}{8} = \frac{5}{8}$$

7. 
$$3h = -42$$

**8.** 
$$8m = 16$$

**9.** 
$$-3t = 51$$

**10.** 
$$-3r = -24$$

11. 
$$8k = -64$$

12. 
$$-2m = 16$$
